Insight Summary: Monthly Sales and Product Profitability

Period: January–March · Products: Laptop, Mobile, Tablet · Amounts in INR (1 lakh = ₹1,00,000) · Source: workbook Sales_Profitability_Analysis.xlsx

₹44.25 L	₹8.56 L	19.3%	March (₹16.0 L)	Mobile (₹3.80 L)
Total revenue	Total gross profit	Gross margin	Highest-revenue month	Highest-profit product

Product	Units sold	Revenue (₹)	Gross profit (₹)	Gross margin	Share of profit
Laptop	37	18,50,000	2,96,000	16.0%	34.6%
Mobile	95	19,00,000	3,80,000	20.0%	44.4%
Tablet	45	6,75,000	1,80,000	26.7%	21.0%
Total	177	44,25,000	8,56,000	19.3%	100%

Key insights

1. Sales grew every month. Revenue rose from ₹13.5 L in January to ₹14.75 L in February (+9.3%) and ₹16.0 L in March (+8.5%). Gross profit grew 25% over the quarter (₹2.56 L to ₹3.20 L) and margin improved from 19.0% to 20.0%.

2. Mobiles are the main profit driver. Mobiles earned ₹3.80 L gross profit, 44% of the total, and sold 95 units. March's growth came mainly from mobiles, which rose from 25 to 40 units (+60%).

3. Laptops are slipping while tablets are rising. Laptops make the most profit per unit (₹8,000) but have the lowest margin (16%), and March sales fell to 10 units from 15 (−33%). Tablets have the best margin (26.7%) and doubled from 10 to 20 units, yet are only 15% of revenue.

Recommendations

1. Grow the tablet business. Increase tablet stock and in-store visibility, and offer mobile + tablet bundles, to expand the highest-margin product while its demand is rising. Track tablet share of revenue monthly (target: above 20%).

2. Recover laptop performance. Find the cause of the March drop (stock-outs, pricing or seasonality) and negotiate a lower purchase cost or add accessory bundles. Every ₹1,000 cut in laptop unit cost raises laptop margin by 2 percentage points.

Note: based on three months of sample data; trends should be confirmed with a longer sales history.
