User Stories, Use Case and UAT Plan: Scheduled Food Delivery

1. Overview

The "Schedule for Later" feature lets customers place a food order now and choose a future delivery date and time slot. The customer selects a slot, confirms a serviceable address, pays, and receives a confirmation; operations staff see all scheduled orders so they can plan restaurants and riders.

Business rules assumed for this document

ID	Rule
BR-01	Orders can be scheduled from **2 hours** to **7 days** ahead of the current time.
BR-02	Delivery slots are **30 minutes** long, within the restaurant's opening hours.
BR-03	Each slot has a maximum order capacity per delivery zone; a full slot is shown as unavailable.
BR-04	The delivery address must be complete, verified on the map, and inside the restaurant's delivery zone.
BR-05	A scheduled order can be changed or cancelled free of charge up to **60 minutes** before the slot starts.
BR-06	Payment is taken at checkout; the slot is reserved only after successful payment.

Actors

Actor	Type	Role in the feature
Customer	Primary	Schedules, reviews, changes or cancels an order
Operations Staff	Primary	Views, filters and monitors scheduled orders; plans riders
Restaurant Partner	Secondary	Receives the scheduled order before the slot and prepares it on time

Actor	Type	Role in the feature
Delivery Partner (Rider)	Secondary	Is assigned to and delivers the order in the slot
Payment Gateway	System	Authorises and captures payment
Maps / Address Validation Service	System	Verifies the address and checks the delivery zone
Notification Service	System	Sends SMS, push and email confirmations and reminders

2. User Stories

ID	Actor	User story	Priority
US-01	Customer	As a customer, I want to choose a future delivery date and time slot, so that my food arrives exactly when I need it.	Must
US-02	Customer	As a customer, I want to confirm and validate my delivery address while scheduling, so that the order is delivered to the right place.	Must
US-03	Customer	As a customer, I want to receive a confirmation and a reminder for my scheduled order, so that I am sure it is booked and know when to expect it.	Must
US-04	Customer	As a customer, I want to change the slot or cancel my scheduled order before the cut-off time, so that I can adjust when my plans change.	Should
US-05	Operations Staff	As an operations staff member, I want to view and filter all scheduled orders by date, slot, zone and status, so that I can plan restaurant preparation and rider capacity in advance.	Must

3. Acceptance Criteria

Acceptance criteria are written for all five stories in Given / When / Then format; Section 5 maps them to the UAT test cases.

US-01 – Choose a delivery date and slot

- **AC-1.1** Given I have items in my cart, when I select "Schedule for later", then I see dates from today up to 7 days ahead and the 30-minute slots for the selected date.
- **AC-1.2** Given a slot has reached capacity, when I view the slot list, then that slot is greyed out, marked "Unavailable" and cannot be selected.
- **AC-1.3** Given the current time is 14:00, when I view today's slots, then no slot starting before 16:00 is shown, and no date beyond 7 days is selectable.
- **AC-1.4** Given I selected a slot, when that slot becomes full before I pay, then I see "This slot is no longer available" and am asked to choose another slot without losing my cart.

US-02 – Confirm the delivery address

- **AC-2.1** Given I enter an address, when it is complete and inside the restaurant's delivery zone, then it is accepted and shown on the map for confirmation.
- **AC-2.2** Given I enter an incomplete address or invalid PIN code, when I tap "Confirm address", then an inline error names the missing or invalid field and I cannot continue.
- **AC-2.3** Given my address is outside the delivery zone, when I confirm it, then I see "This restaurant does not deliver to this address" and am offered to change the address.

US-03 – Receive confirmation and reminder

- **AC-3.1** Given my payment succeeds, then I see a confirmation screen with order ID, date, slot, address and amount within 5 seconds.
- **AC-3.2** Given the order is confirmed, then I receive an SMS/push and email confirmation within 2 minutes.
- **AC-3.3** Given my slot starts in 60 minutes, then I receive a reminder with an option to change or cancel.

US-04 – Change or cancel before cut-off

- **AC-4.1** Given the slot starts more than 60 minutes from now, when I change the slot to another available slot, then the order is updated and I receive a new confirmation.
- **AC-4.2** Given the slot starts more than 60 minutes from now, when I cancel, then the order is cancelled and a full refund is initiated.
- **AC-4.3** Given the slot starts in 60 minutes or less, when I open the order, then the change and cancel options are disabled with a message explaining the cut-off.

US-05 – View scheduled orders (Operations)

- **AC-5.1** Given I am logged in as operations staff, when I open "Scheduled Orders", then I see each order's ID, customer, restaurant, zone, date, slot and status.
- **AC-5.2** Given I apply filters for date, slot, zone or status, then only matching orders are shown, with a count per slot.

- **AC-5.3** Given a customer changes or cancels an order, then the operations view reflects the change within 1 minute.
- **AC-5.4** Given I am logged in as a customer, when I try to open the operations view, then access is denied.

4. Detailed Use Case: UC-01 Schedule an Order for Later Delivery

Field	Description
Use case ID	UC-01
Use case name	Schedule an order for later delivery
Primary actor	Customer
Secondary actors	Payment Gateway, Maps / Address Validation Service, Notification Service, Restaurant Partner, Operations Staff
Related stories	US-01, US-02, US-03
Trigger	Customer selects "Schedule for later" at checkout
Frequency	Several times a day per active customer; peak on weekends and festivals

Preconditions

1. The customer is logged in to the app with a verified mobile number.
2. The cart contains at least one item from a single restaurant.
3. The restaurant has scheduling enabled and published opening hours for the next 7 days.
4. Slot capacities for each delivery zone are configured by operations.

Main success flow

1. Customer opens the cart and selects **"Schedule for later"**.
2. System displays selectable dates from today to today + 7 days.
3. Customer selects a date.
4. System displays 30-minute slots within the restaurant's opening hours, starting at least 2 hours from now, and marks full slots as unavailable.
5. Customer selects an available slot.
6. System temporarily holds the slot for 10 minutes and shows the customer's saved addresses.

7. Customer selects or enters a delivery address and taps **"Confirm address"**.
8. System validates the address with the Maps service and confirms it is inside the delivery zone.
9. System shows the order summary: items, date, slot, address, charges and total.
10. Customer selects a payment method and pays.
11. Payment Gateway confirms payment; the system converts the hold into a confirmed slot booking and creates the order with status **"Scheduled"**.
12. System shows the confirmation screen and the Notification Service sends SMS/push and email confirmation.
13. System adds the order to the operations Scheduled Orders view and sends it to the restaurant at the configured preparation lead time before the slot.

Alternate and exception flows

- **A1 – Slot unavailable (step 4–5):** a full slot cannot be selected. If the selected slot fills before payment (step 11), the system releases the hold, shows "This slot is no longer available", and returns to step 4 with the cart kept.
- **A2 – Invalid address (step 8):** if the address is incomplete, the PIN code is invalid, or the map cannot find it, the system shows a field-level error and stays at step 7.
- **A3 – Address outside delivery zone (step 8):** the system shows "This restaurant does not deliver to this address" and offers to change the address or restaurant; flow returns to step 7.
- **A4 – Time outside allowed window (steps 2–5):** dates beyond 7 days and slots less than 2 hours ahead are not shown. If the customer resumes a session after the 10-minute hold expires or the slot moves inside the 2-hour limit, the system shows "Please choose a new slot" and returns to step 4.
- **A5 – Payment failure (step 11):** the system shows the failure reason, keeps the slot hold until it expires, and lets the customer retry or change the payment method. No order is created.
- **A6 – Restaurant closes or disables scheduling:** affected slots are hidden; if an order already exists, operations are alerted and the customer is notified with options to reschedule or cancel with a full refund.

Postconditions

- **Success:** the order is saved with status "Scheduled", the slot capacity is reduced by one, payment is captured, the customer has received confirmation, and the order appears in the operations view.
- **Failure:** no order is created, no payment is captured (or any captured amount is auto-refunded), and the held slot is released for other customers.

Business rules applied: BR-01 to BR-04 and BR-06 (Section 1).

5. UAT Plan and Traceability

Eight UAT test cases (UAT-01 to UAT-08) are provided in the accompanying Excel sheet, *UAT_Test_Cases_Scheduled_Delivery.xlsx*, with ID, scenario, preconditions, steps, test data, expected result and a Pass/Fail field.

Approach

- **Environment:** UAT/staging app (Android, iOS and web) with test restaurants, test delivery zones and a sandbox payment gateway.
- **Testers:** 3 business users from Customer Experience and 2 from Operations.
- **Entry criteria:** system testing complete with no open critical defects; test data (restaurants, slots, capacities, addresses) loaded.
- **Exit criteria:** all 8 test cases executed; 100% of Must-priority cases passed; no open Critical or High defects; sign-off by Product Owner and Operations Head.

Traceability: user stories to UAT cases

User story	Acceptance criteria tested	UAT test cases
US-01 Choose date and slot	AC-1.1, AC-1.2, AC-1.3, AC-1.4	UAT-01, UAT-02, UAT-03, UAT-06
US-02 Confirm address	AC-2.1, AC-2.2, AC-2.3	UAT-01, UAT-04, UAT-05
US-03 Confirmation and reminder	AC-3.1, AC-3.2	UAT-01
US-04 Change or cancel	AC-4.1, AC-4.3	UAT-07
US-05 Operations view	AC-5.1, AC-5.2, AC-5.3	UAT-08

Edge-case coverage

Edge case	How it is tested	UAT cases
Unavailable slots	Full slot cannot be selected; slot that fills during checkout is released and customer re-selects	UAT-02, UAT-03

Edge case	How it is tested	UAT cases
Invalid addresses	Incomplete address / invalid PIN code blocked; address outside delivery zone rejected	UAT-04, UAT-05
Scheduling outside the allowed window	Slots under 2 hours ahead and dates beyond 7 days cannot be chosen; boundary values tested	UAT-06

AC-3.3 (reminder), AC-4.2 (cancellation refund) and AC-5.4 (operations access control) are recommended for the next regression cycle.
